Hannibal Gas Plant  
1997 Shutdown

PIRECO  
ARRIVEE  
11 AGUT 1997

*Handwritten signature*

I would like to take this opportunity, albeit belatedly, to thank yourself and the Pireco organisation for your recent significant contribution to the successful completion of our first planned inspection shutdown at the Hannibal Gas Plant.

All planned works and some significant additional unplanned work arising from unforeseen problems were completed to schedule enabling the plant to return to production a day earlier than planned. Particularly pleasing was the fact that we did not experience a single lost time accident and this can be largely attributed to the improvement of safety awareness of the Pireco workforce.

The support of your associate Company SCIN in providing us with some critical stainless steel fabrications at very short notice was much appreciated and in general your organisations willingness to assist in solving problems was a noticeable feature of this shutdown.

Yours sincerely

*B. Lowe*
